

58. International Winter Meeting on Nuclear Physics

Monday 20 January 2020 - Friday 24 January 2020

Bormio, Italy

Scientific Programme

Unlike many workshops, the Bormio meeting does not focus on a single topic. Instead, the aim is to bring together researchers and students from related fields in subatomic physics. Addressed topics include hadron physics, heavy ion physics, nuclear astrophysics and nuclear structure, particle physics, detectors and future projects as well as applications of these fields. The programme includes review talks by invited speakers as well as contributed talks and posters. Additional informations are available at www.bormiomeeting.com

Fundamental Interactions

Particle physics

Hadron Physics

Heavy Ion Physics

Nuclear Structure and Nuclear Astrophysics

Detectors and new facilities

Applications
