# Opportunities with $B_{c}$ semileptonic decays 

Fulvia De Fazio

INFN Bari

## Pushing the limits of theoretical physics

10th anniversary of MITP
Mainz, May 12th, 2023
based on works in collaboration with
P. Colangelo, F. Loparco, N. Losacco, M. Novoa-Brunet

- Semileptonic $B_{c}$ decays: motivations
- Spin symmetry + NRQCD : relations among FF in the SM and BSM
- Application to $\mathrm{B}_{\mathrm{c}} \rightarrow \mathrm{J} / \psi$ and $\mathrm{B}_{\mathrm{c}} \rightarrow \eta_{\mathrm{c}}$ form factors
- Application to $\mathrm{B}_{\mathrm{c}}$ to P -wave charmonia and insights on $\mathrm{X}(3872)$
- Other semileptonic $\mathrm{B}_{\mathrm{c}}$ decays: $\mathrm{c} \rightarrow \mathrm{s}, \mathrm{d}$ transitions
- Summary

> $\mathrm{b} \rightarrow \mathrm{c}$ transitions
- Precisely measure $\left|\mathrm{V}_{\mathrm{cb}}\right|$ : insights on the tension from inclusive/exclusive determinations
- Anomalies shown up in modes induced by b $\rightarrow$ c $\ell v_{\ell}$ transition
$\xrightarrow{\square}$ Look for new modes/observables/correlations
> other quark-level transitions (e.g. c $\rightarrow$ s,d)
- do anomalies show up?
$\xrightarrow{\square}$ Look for new modes/observables/correlations

## Semileptonic $B_{c}$ decays

$B_{c}$

- discovered at Tevatron in 1998
- $\mathrm{m}_{\mathrm{Bc}}=6.274 .47+/-0.27+/-0.17 \mathrm{GeV}$
- $\tau_{\mathrm{Bc}}=0.510+/-0.009 \mathrm{ps}$
- decays weakly
- possible modes: annihilation, $b$ transitions, $c$ transitions (dominant)

## Motivations:

1. explore BSM effects
2. $B_{c} \rightarrow$ charmonium: probe the structure of the charmonia produced in the decay

control of theoretical uncertainties in phenomenological analyses requires reliable determination of the hadronic form factors

- NP exists at a high scale $\Lambda \gg M_{w}$
- NP gauge group contains the SM group
- SM gauge fields contained
- $S M$ an effective theory at the scale $M_{w}$

Buchmuller et al,NPB 268 (1986) 621 Grzadkowski et al., JHEP 10 (2010) 085

Weinberg operator: v oscillations
$\uparrow$

accidental symmetries

- violates accidental symmetries
- source of (SM) CP violation
- fermion mass terms

Generalized effective Hamiltonian

$$
\begin{aligned}
H_{\mathrm{eff}}^{b \rightarrow c} \bar{\nu}=\frac{G_{F}}{\sqrt{2}} V_{c b}[(1 & \left.+\epsilon_{V}^{\ell}\right)\left(\bar{c} \gamma_{\mu}\left(1-\gamma_{5}\right) b\right)\left(\bar{\ell} \gamma^{\mu}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& +\epsilon_{R}^{\ell}\left(\bar{c} \gamma_{\mu}\left(1+\gamma_{5}\right) b\right)\left(\bar{\ell} \gamma^{\mu}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& +\epsilon_{S}^{\ell}(\bar{c} b)\left(\bar{\ell}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& +\epsilon_{P}^{\ell}\left(\bar{c} \gamma_{5} b\right)\left(\bar{\ell}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& \left.+\epsilon_{T}^{\ell}\left(\bar{c} \sigma_{\mu \nu}\left(1-\gamma_{5}\right) b\right)\left(\bar{\ell} \sigma^{\mu \nu}\left(1-\gamma_{5}\right) \nu_{\ell}\right)\right]
\end{aligned}
$$

complex
lepton flavour dependent couplings

Generalized effective Hamiltonian

$$
\begin{aligned}
H_{\mathrm{eff}}^{b \rightarrow c \ell \bar{\nu}}=\frac{G_{F}}{\sqrt{2}} V_{c b}[(1 & \left.+\epsilon_{V}^{\ell}\right)\left(\bar{c} \gamma_{\mu}\left(1-\gamma_{5}\right) b\right)\left(\bar{\ell} \gamma^{\mu}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& +\epsilon_{R}^{\ell}\left(\bar{c} \gamma_{\mu}\left(1+\gamma_{5}\right) b\right)\left(\bar{\ell} \gamma^{\mu}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& +\epsilon_{S}^{\ell}(\bar{c} b)\left(\bar{\ell}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& +\epsilon_{P}^{\ell}\left(\bar{c} \gamma_{5} b\right)\left(\bar{\ell}\left(1-\gamma_{5}\right) \nu_{\ell}\right) \\
& \left.+\epsilon_{T}^{\ell}\left(\bar{c} \sigma_{\mu \nu}\left(1-\gamma_{5}\right) b\right)\left(\bar{\ell} \sigma^{\mu \nu}\left(1-\gamma_{5}\right) \nu_{\ell}\right)\right]
\end{aligned}
$$

larger set of form factors required wrt the SM case
complex
lepton flavour dependent couplings
$\Rightarrow \mathrm{B}_{\mathrm{c}} \rightarrow \eta_{\mathrm{c}}, \mathrm{J} / \psi$

Motivations:

1. explore BSM effects

1S-wave charmonia $\quad J^{P C}=\left(0^{--}, 1^{-}\right)$
$>\mathrm{B}_{\mathrm{c}} \rightarrow \eta_{\mathrm{c}}, \mathrm{J} / \psi$
$>\mathrm{B}_{\mathrm{c}} \rightarrow \chi_{\mathrm{c} 0}, \chi_{\mathrm{c} 1}, \chi_{\mathrm{c} 2}, \mathrm{~h}_{\mathrm{c}}$
$>\mathrm{B}_{\mathrm{c}} \rightarrow \chi^{\prime}{ }_{\mathrm{c} 0}, \chi^{\prime}{ }_{\mathrm{c} 1}, \chi^{\prime}{ }_{\mathrm{c} 2}, \mathrm{~h}^{\prime}{ }_{\mathrm{c}}$

1S-wave charmonia $\quad J^{P C}=\left(0^{--}, 1^{-}\right)$
1P-wave charmonia $\quad \mathrm{JPC}=\left(0^{++}, 1^{++}, 2^{++}, 1^{+-}\right)$
2P-wave charmonia $\mathrm{JPC}^{\mathrm{P}}=\left(0^{++}, 1^{++}, 2^{++}, 1^{+-}\right)$

Motivations:

1. explore BSM effects
2. $B_{c} \rightarrow$ charmonium: probe the structure of the charmonia produced in the decay
$\rightarrow$ question: can $X(3872)$ be identified with $\chi_{c 1}(2 P)$ ?

## A few details on $X(3872)$

## X(3872)

- discovered by Belle in 2003, confirmed by CDF, DO, BaBar,...
- in $2015 \mathrm{LHCb}: \mathrm{J}^{\mathrm{P}}=1^{++} \quad \square$ candidate for identification with $\chi_{\mathrm{c} 1}$ (2P)
- other possible interpretations - tetraquark
- D D* molecule (proximity to the threshold)
- isospin violation disfavours the charmonium interpretation (but phase space suppression is at work)
- the preference of $\psi(2 S) \gamma$ wrt $J / \psi \gamma$ favours the interpretation as $\chi_{c 1}(2 P)$
look for further information:
does $X(3872)$ fulfill the expectations for the production of $\chi_{c 1}(2 P)$ in semileptonic $B_{c}$ decays?

## Semileptonic $B_{c}$ decays to charmonium

$$
\begin{array}{rlrl}
B_{c} \rightarrow \eta_{c}: & & & \mathrm{NP} \\
\left\langle\eta_{c}\left(v^{\prime}\right)\right| \bar{Q}^{\prime} \gamma_{\mu} Q\left|B_{c}(v)\right\rangle & =\sqrt{m_{P} m_{B_{c}}}\left[h_{+}(w)\left(v+v^{\prime}\right)_{\mu}+h_{-}(w)\left(v-v^{\prime}\right)_{\mu}\right] & & \\
\left\langle\eta_{c}\left(v^{\prime}\right)\right| \bar{Q}^{\prime} Q\left|B_{c}(v)\right\rangle & =\sqrt{m_{P} m_{B_{c}}} h_{S}(w)(1+w) & w=v \cdot v^{\prime} \\
\left\langle\eta_{c}\left(v^{\prime}\right)\right| \bar{Q}^{\prime} \sigma_{\mu \nu} Q\left|B_{c}(v)\right\rangle & =-i \sqrt{m_{P} m_{B_{c}}} h_{T}(w)\left(v_{\mu} v_{\nu}^{\prime}-v_{\nu} v_{\mu}^{\prime}\right) &
\end{array}
$$

$$
\begin{aligned}
& B_{c} \rightarrow J / \psi: \\
&\left\langle J / \psi\left(v^{\prime}, \epsilon\right)\right| \bar{Q}^{\prime} \gamma_{\mu} Q\left|B_{c}(v)\right\rangle=i \sqrt{m_{V} m_{B_{c}}} h_{V}(w) \epsilon_{\mu \nu \alpha \beta} \epsilon^{* \nu} v^{\prime \alpha} v^{\beta} \\
&\left\langle J / \psi\left(v^{\prime}, \epsilon\right)\right| \bar{Q}^{\prime} \gamma_{\mu} \gamma_{5} Q\left|B_{c}(v)\right\rangle=\sqrt{m_{V} m_{B_{c}}}\left[h_{A_{1}}(w)(1+w) \epsilon_{\mu}^{*}-h_{A_{2}}(w)\left(\epsilon^{*} \cdot v\right) v_{\mu}-h_{A_{3}}(w)\left(\epsilon^{*} \cdot v\right) v_{\mu}^{\prime}\right] \\
&\left\langle J / \psi\left(v^{\prime}, \epsilon\right)\right| \bar{Q}^{\prime} \gamma_{5} Q\left|B_{c}(v)\right\rangle=-\sqrt{m_{V} m_{B_{c}}} h_{P}(w)\left(\epsilon^{*} \cdot v\right) \\
&\left\langle J / \psi\left(v^{\prime}, \epsilon\right)\right| \bar{Q}^{\prime} \sigma_{\mu \nu} Q\left|B_{c}(v)\right\rangle=-\sqrt{m_{V} m_{B_{c}}} \epsilon^{\mu \nu \alpha \beta}\left[h_{T_{1}}(w) \epsilon_{\alpha}^{*}\left(v+v^{\prime}\right)_{\beta}+h_{T_{2}}(w) \epsilon_{\alpha}^{*}\left(v-v^{\prime}\right)_{\beta}\right. \\
&\left.+h_{T_{3}}(w)\left(\epsilon^{*} \cdot v\right) v_{\alpha} v_{\beta}^{\prime}\right]
\end{aligned}
$$

## Semileptonic $B_{c}$ decays to charmonium

$$
\begin{aligned}
& \left\langle h_{c}\left(v^{\prime}, \epsilon\right)\right| \bar{c} b\left|B_{c}(v)\right\rangle=\sqrt{m_{h_{c}} m_{B_{c}}}\left(\epsilon^{*} \cdot v\right) f_{S}(w) \\
& \left\langle h_{c}\left(v^{\prime}, \epsilon\right)\right| \bar{c} \sigma_{\mu \nu} b\left|B_{c}(v)\right\rangle=i \sqrt{m_{h_{c}} m_{B_{c}}}\left[f_{T_{1}}(w)\left(\epsilon_{\mu}^{*}\left(v+v^{\prime}\right)_{\nu}-\epsilon_{\nu}^{*}\left(v+v^{\prime}\right)_{\mu}\right)\right. \\
& +f_{T_{2}}(w)\left(\epsilon_{\mu}^{*}\left(v-v^{\prime}\right)_{\nu}-\epsilon_{\nu}^{*}\left(v-v^{\prime}\right)_{\mu}\right) \\
& \left.+f_{T 3}(w)\left(\epsilon^{*} \cdot v\right)\left(v_{\mu} v_{\nu}^{\prime}-v_{\nu} v_{\mu}^{\prime}\right)\right] \text {. } \\
& B_{c} \rightarrow \chi_{c 2}: \\
& \left\langle\chi_{c 2}\left(v^{\prime}, \eta\right)\right| \bar{c} \gamma_{\mu} b\left|B_{c}(v)\right\rangle=\sqrt{m_{\chi c 2} m_{B_{c}}} i k_{V}(w) \epsilon_{\mu \alpha \beta \sigma} \eta^{* \alpha \tau} v_{\tau} v^{\beta} v^{\prime \sigma} \\
& \left\langle\chi_{c 2}\left(v^{\prime}, \eta\right)\right| \bar{c} \gamma_{\mu} \gamma_{5} b\left|B_{c}(v)\right\rangle=\sqrt{m_{\chi_{c 2}} m_{B_{c}}}\left[k_{A_{1}}(w) \eta_{\mu \alpha}^{*} v^{\alpha}+\eta_{\alpha \beta}^{*} v^{\alpha} v^{\beta}\left(k_{A_{2}}(w) v_{\mu}+k_{A_{3}}(w) v_{\mu}^{\prime}\right)\right] \\
& \left\langle\chi_{c 2}\left(v^{\prime}, \eta\right)\right| \bar{c} \gamma_{5} b\left|B_{c}(v)\right\rangle=\sqrt{m_{\chi_{c 2}} m_{B_{c}}} k_{P}(w) \eta_{\alpha \beta}^{*} v^{\alpha} v^{\beta} \\
& \left\langle\chi_{c 2}\left(v^{\prime}, \eta\right)\right| \bar{\sigma} \sigma_{\mu \nu} \gamma_{5} b\left|B_{c}(v)\right\rangle=i \sqrt{m_{\chi_{c 2}} m_{B_{c}}}\left[k_{T_{1}}(w)\left(\eta_{\mu}^{* \alpha} v_{\alpha} v_{\nu}-\eta_{\nu}^{* \alpha} v_{\alpha} v_{\mu}\right)+\right. \\
& \left.+k_{T_{2}}(w)\left(\eta_{\mu}^{* \alpha} v_{\alpha} v_{\nu}^{\prime}-\eta_{\nu}^{* \alpha} v_{\alpha} v_{\mu}^{\prime}\right)+k_{T_{3}}(w) \eta_{\alpha \beta}^{*} v^{\alpha} v^{\beta}\left(v_{\mu} v_{\nu}^{\prime}-v_{\nu} v_{\mu}^{\prime}\right)\right]
\end{aligned}
$$

HQ limit: decoupling of the HQ

- Heavy-light mesons $\rightarrow \mathrm{HQ}$ spin \& flavour symmetry
- Heavy-heavy mesons $\rightarrow$ HQ spin symmetry
relations among the FF in selected kinematical ranges
Heavy-light mesons:
FF of weak matrix elements between heavy-light mesons are all described by the Isgur-Wise function

Heavy-heavy meson decays

$\qquad$ IR divergent for 2 HQs with the same v

- Infrared divergences regulated in the HQ limit by the kinetic energy operator $O_{\pi}$

Thacker and Lepage, PRD43 (1991) 196

- $O_{\pi}$ breaks flavour symmetry $\rightarrow$ only spin symmetry

## Systems with heavy quarks: effective theories at work

- expansion parameters for a system with 2 Heavy Quarks: 1. relative HQ 3-velocity (hadron rest-frame) (NRQCD)

2. inverse $H Q$ mass $1 / m_{Q}(H Q E T)$

- HQ field:

$$
\begin{gathered}
Q(x)=e^{-i m_{Q} v \cdot x} \psi(x)=e^{-i m_{Q} v \cdot x}\left(\psi_{+}(x)+\psi_{-}(x)\right) \quad \psi_{ \pm}(x)=P_{ \pm} \psi(x)=\frac{1 \pm \not \psi^{\prime}}{2} \psi(x) \\
Q(x)=e^{-i m_{Q} v \cdot x}\left(1+\frac{i \not D_{\perp}}{2 m_{Q}}+\frac{(-i v \cdot D)}{2 m_{Q}} \frac{i \not D_{\perp}}{2 m_{Q}}+\ldots\right) \psi_{+}(x) \quad D_{\perp \mu}=D_{\mu}-(v \cdot D) v_{\mu} \\
\mathcal{L}_{Q C D}=\bar{\psi}_{+}(x)\left(i v \cdot D+\frac{\left(i D_{\perp}\right)^{2}}{2 m_{Q}}+\frac{g}{4 m_{Q}} \sigma \cdot G_{\perp}+\frac{i \not D_{\perp}}{2 m_{Q}} \frac{(-i v \cdot D)}{2 m_{Q}}\left(i \not D_{\perp}\right)+\ldots\right) \psi_{+}(x)
\end{gathered}
$$

$$
\begin{array}{l|ll}
\hline \text { power counting in NRQCD } & \psi_{+} \sim \tilde{v}^{3 / 2} & \\
D_{\perp} \sim \tilde{v} & D_{t} \sim \tilde{v}^{2} \\
E_{i}=G_{0 i} \sim \tilde{v}^{3} & B_{i}=\frac{1}{2} \epsilon_{i j k} G^{j k} \sim \tilde{v}^{4}
\end{array}
$$

$$
\begin{array}{cl}
\hline \mathcal{L}_{Q C D}=\bar{\psi}_{+}(x)\left(i v \cdot D+\frac{\left(i D_{\perp}\right)^{2}}{2 m_{Q}}+\frac{g}{4 m_{Q}} \sigma \cdot G_{\perp}+\frac{i \not D_{\perp}}{2 m_{Q}} \frac{(-i v \cdot D)}{2 m_{Q}}\left(i \not D_{\perp}\right)+\ldots\right) \psi_{+}(x) \\
\mathcal{O}\left(\tilde{v}^{2}\right) \mathrm{LO} & \mathcal{O}\left(\tilde{v}^{4}\right) \mathrm{NLO} \\
\mathcal{L}_{0}=\bar{\psi}_{+}(x)\left(i v \cdot D+\frac{\left(i D_{\perp}\right)^{2}}{2 m_{Q}}\right) \psi_{+}(x) & \mathcal{L}_{1}=\mathcal{L}_{1,1}+\mathcal{L}_{1,2}
\end{array}
$$

$$
\langle C| \bar{Q}^{\prime} \Gamma Q\left|B_{c}\right\rangle \quad C=\eta_{c}, J / \psi \quad C=\chi_{c 0}, \chi_{c 1}, \chi_{c 2}, h_{c}
$$

follow the same steps as for heavy-light mesons
I. expand the current:

$$
\bar{Q}^{\prime}(x) \Gamma Q(x)=J_{0}+\left(\frac{J_{1,0}}{2 m_{Q}}+\frac{J_{0,1}}{2 m_{Q^{\prime}}}\right)+\left(-\frac{J_{2,0}}{4 m_{Q}^{2}}-\frac{J_{0,2}}{4 m_{Q^{\prime}}^{2}}+\frac{J_{1,1}}{4 m_{Q} m_{Q^{\prime}}}\right)
$$

$$
\begin{array}{ll}
J_{0}=\bar{\psi}_{+}^{\prime} \Gamma \psi_{+} & \\
J_{1,0}=\bar{\psi}_{+}^{\prime} \Gamma i \vec{D}_{\perp} \psi_{+} & J_{0,1}=\bar{\psi}_{+}^{\prime}\left(-i \overleftarrow{\not D}_{\perp}^{\prime}\right) \Gamma \psi_{+} \\
J_{2,0}=\bar{\psi}_{+}^{\prime} \Gamma(i v \cdot \vec{D}) i \overrightarrow{D D}_{\perp} \psi_{+} & J_{0,2}=\bar{\psi}_{+}^{\prime} i{\overleftarrow{म D^{\prime}} \perp}_{\perp}\left(i v^{\prime} \cdot \overleftarrow{D}\right) \Gamma \psi_{+} \quad J_{1,1}=\bar{\psi}_{+}^{\prime}\left(-i \overleftarrow{D^{\prime}} \perp\right) \Gamma\left(i \overrightarrow{म D}_{\perp}\right) \psi_{+}
\end{array}
$$

II: exploit spin symmetry:
doublet of negative parity states:

$$
\begin{aligned}
& \left(B_{c}, B_{c}^{*}\right) \longrightarrow \mathcal{M}(v)=P_{+}(v)\left[B_{c}^{* \mu} \gamma_{\mu}-B_{c} \gamma_{5}\right] P_{-}(v) \\
& \left(\eta_{c}, J / \psi\right) \longrightarrow \mathcal{M}^{\prime}\left(v^{\prime}\right)=P_{+}\left(v^{\prime}\right)\left[\Psi^{* \mu} \gamma_{\mu}-\eta_{c} \gamma_{5}\right] P_{-}\left(v^{\prime}\right)
\end{aligned}
$$

4-plet of positive parity states $\quad\left(\chi_{c 0,1,2}, h_{c}\right)$

$$
\mathcal{M}^{\prime \mu}\left(v^{\prime}\right)=P_{+}\left(v^{\prime}\right)\left[\chi_{c 2}^{\mu \nu} \gamma_{\nu}+\frac{1}{\sqrt{2}} \chi_{c 1, \gamma} \epsilon^{\mu \alpha \beta \gamma} v_{\alpha}^{\prime} \gamma_{\beta}+\frac{1}{\sqrt{3}} \chi_{c 0}\left(\gamma^{\mu}-v^{\prime \mu}\right)+h_{c}^{\mu} \gamma_{5}\right] P_{-}\left(v^{\prime}\right) \quad v_{\mu}^{\prime} \mathcal{M}^{\mu}=0
$$

analogous for 2P charmonia
III. trace formalism:

$$
\langle C| \bar{Q}^{\prime} \Gamma D_{\mu_{1}} D_{\mu_{2}} \ldots Q\left|B_{c}\right\rangle=-\operatorname{Tr}\left[\mathcal{F}_{\mu_{1} \mu_{2} \ldots} . \overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right]
$$

$\nabla$
universal functions: the same for all the members of the multiplet of final states relations among the various modes

## Form Factors in the effective theory

III. trace formalism: at LO in the HQ expansion all the matrix elements involve a single universal function

$$
\left\langle M^{\prime}\left(v^{\prime}\right)\right| J_{0}|M(v)\rangle=\Xi(w) v_{\mu} \operatorname{Tr}\left[\overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right]
$$

## Form Factors in the effective theory

III. trace formalism: At LO in the HQ expansion all the matrix elements involve a single universal function

$$
\left\langle M^{\prime}\left(v^{\prime}\right)\right| J_{0}|M(v)\rangle=\Xi(w) v_{\mu} \operatorname{Tr}\left[\overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right]
$$

$O\left(1 / m_{Q}\right)$

$$
\begin{aligned}
\left\langle M^{\prime}\left(v^{\prime}\right)\right| \bar{\psi}_{+}^{\prime} \Gamma i \vec{D}_{\alpha} \psi_{+}|M(v)\rangle & =-\operatorname{Tr}\left[\Sigma_{\mu \alpha}^{(b)} \overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right] \\
\left\langle M^{\prime}\left(v^{\prime}\right)\right| \bar{\psi}_{+}^{\prime}\left(-i \overleftarrow{D}_{\alpha}\right) \Gamma \psi_{+}|M(v)\rangle & =-\operatorname{Tr}\left[\Sigma_{\mu \alpha}^{(c)} \overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right]
\end{aligned}
$$

$$
\Sigma_{\mu \alpha}^{(Q)}=\Sigma_{1}^{(Q)} g_{\mu \alpha}+\Sigma_{2}^{(Q)} v_{\mu} v_{\alpha}+\Sigma_{3}^{(Q)} v_{\mu} v_{\alpha}^{\prime}+\Sigma_{4}^{(Q)} v_{\mu} \gamma_{\alpha}+\Sigma_{5}^{(Q)} \gamma_{\mu} v_{\alpha}+\Sigma_{6}^{(Q)} \gamma_{\mu} v_{\alpha}^{\prime}+\Sigma_{7}^{(Q)} i \sigma_{\mu \alpha}
$$

constraints:

$$
\begin{aligned}
& \Sigma_{i}^{(b)}(w)-\Sigma_{i}^{(c)}(w)=0 \quad i=1,4,5,6,7 \\
& \Sigma_{2}^{(b)}(w)-\Sigma_{2}^{(c)}(w)=\tilde{\Lambda} \Xi, \\
& \Sigma_{3}^{(b)}(w)-\Sigma_{3}^{(c)}(w)=-\tilde{\Lambda}^{\prime} \Xi(w) .
\end{aligned}
$$

## Form Factors in the effective theory

III. trace formalism: At LO in the HQ expansion all the matrix elements involve a single universal function

$$
\left\langle M^{\prime}\left(v^{\prime}\right)\right| J_{0}|M(v)\rangle=\Xi(w) v_{\mu} \operatorname{Tr}\left[\overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right]
$$

$O\left(1 / m_{Q}\right)$

$$
\begin{aligned}
\left\langle M^{\prime}\left(v^{\prime}\right)\right| \bar{\psi}_{+}^{\prime} \Gamma i \vec{D}_{\alpha} \psi_{+}|M(v)\rangle & =-\operatorname{Tr}\left[\Sigma_{\mu \alpha}^{(b)} \overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right] \\
\left\langle M^{\prime}\left(v^{\prime}\right)\right| \bar{\psi}_{+}^{\prime}\left(-i \overleftarrow{D}_{\alpha}\right) \Gamma \psi_{+}|M(v)\rangle & =-\operatorname{Tr}\left[\Sigma_{\mu \alpha}^{(c)} \overline{\mathcal{M}}^{\prime \mu} \Gamma \mathcal{M}\right]
\end{aligned}
$$

$\mathrm{O}\left(1 / \mathrm{m}_{\mathrm{Q}}\right)^{2}$

$$

\end{aligned}
$$

## $\mathrm{B}_{\mathrm{c}} \rightarrow\left(\chi_{\mathrm{c} 0}, \chi_{\mathrm{c} 1}, \chi_{\mathrm{c} 2}, \mathrm{~h}_{\mathrm{c}}\right)$ exploiting FF relations at LO

| $\frac{d \Gamma\left(B_{c} \rightarrow \chi_{c 1} \ell \bar{\nu}\right) / d w}{d \Gamma\left(B_{c} \rightarrow \chi_{c 0} \ell \bar{\nu}\right) / d w}$ | $\frac{d \Gamma\left(B_{c} \rightarrow \chi_{c 2} \ell \bar{\nu}\right) / d w}{d \Gamma\left(B_{c} \rightarrow \chi_{c 1} \ell \bar{\nu}\right) / d w}$ |
| :--- | :--- |

the universal function cancels in the ratio

$\cdots \frac{\Gamma\left(B_{c} \rightarrow \chi_{c 1} \ell \bar{\nu}_{\ell}\right)}{\Gamma\left(B_{c} \rightarrow \chi_{c 0} \ell \bar{\nu}_{\ell}\right)}$
$-----\frac{\Gamma\left(B_{c} \rightarrow \chi_{c 2} \ell \bar{\nu}_{\ell}\right)}{\Gamma\left(B_{c} \rightarrow \chi_{c 1} \ell \bar{\nu}_{\ell} \ell\right.}$

- constraint at LO both in SM and for generic NP

$$
2 \frac{d \Gamma}{d w}\left(B_{c} \rightarrow \chi_{c 0} \ell \bar{\nu}_{\ell}\right)+\frac{d \Gamma}{d w}\left(B_{c} \rightarrow \chi_{c 1} \ell \bar{\nu}_{\ell}\right)-\frac{d \Gamma}{d w}\left(B_{c} \rightarrow \chi_{c 2} \ell \bar{\nu}_{\ell}\right)=0 .
$$

to be satisfied by the three members of the 4-plet

$\Xi_{0} \in[0.1,1], \Xi_{1} \in[-1,0]$ and $\Xi_{2} \in[-1,1]$
fulfill $\mathcal{B}\left(B_{c}^{+} \rightarrow \chi_{c 0} \pi^{+}\right)=\left(2.4 \pm_{0.8}^{0.9}\right) \times 10^{-5}$
correlations predicted:

$\mathrm{Bc} \rightarrow\left(\chi_{\mathrm{c} 0}, \chi_{\mathrm{c} 1}, \chi_{\mathrm{c} 2}, h_{\mathrm{c}}\right)$ exploiting FF relations at LO
tests of LFU:

$$
R(C)=\frac{\Gamma\left(B_{c} \rightarrow C \tau \bar{\nu}_{\tau}\right)}{\Gamma\left(B_{c} \rightarrow C \mu \bar{\nu}_{\mu}\right)}
$$

At NLO the number of universal functions increase. However:

- they enter in different modes, model independent predictions
- can be used also in other processes
- model independent: tests of direct computations (should satisfy the effective theory predictions)
- Once reliable determinations for a few form factors are available (i.e. by lattice QCD) the others are predicted
- a reduced number of structures contributes close to $\mathrm{w}=1$ :

$$
\begin{aligned}
& \lim _{w \rightarrow 1} \frac{1}{\tilde{\Gamma}} \frac{d \Gamma}{d w}\left(B_{c} \rightarrow \chi_{c 0} \ell \bar{\nu}_{\ell}\right)=18 \hat{m}_{\ell}^{2}\left(\epsilon_{b}+\epsilon_{c}\right)^{2}\left[\Sigma_{\chi c 1,1}^{(b)}(1)\right]^{2} \\
& \lim _{w \rightarrow 1} \frac{1}{\tilde{\Gamma}} \frac{d \Gamma}{d w}\left(B_{c} \rightarrow \chi_{c 1} \ell \bar{\nu}_{\ell}\right)=12\left[2\left(1-r_{1}\right)^{2}+\hat{m}_{\ell}^{2}\right]\left[\epsilon_{b} \Sigma_{\chi_{c 1}, 1}^{(b)}(1)-\epsilon_{c} \Sigma_{\chi_{c 1}, 1}^{(c)}(1)\right]^{2} \\
& \lim _{w \rightarrow 1} \frac{1}{\tilde{\Gamma}} \frac{d \Gamma}{d w}\left(B_{c} \rightarrow h_{c} \ell \bar{\nu}_{\ell}\right)=6\left[2\left(1-r_{h}\right)^{2}+\hat{m}_{\ell}^{2}\right]\left[\left(\epsilon_{b}-\epsilon_{c}\right) \Sigma_{\chi c 1,1}^{(b)}(1)+2 \epsilon_{c} \Sigma_{\chi c 1,1}^{(c)}(1)\right]^{2}
\end{aligned}
$$

$$
\hat{m}_{\ell}^{2}=\frac{m_{\ell}^{2}}{m_{B_{c}}^{2}}
$$

$$
r=m_{C} / m_{B_{c}} \quad C=m_{\chi_{c 0}}, \chi_{c 1}, \chi_{c 2}, h_{c}
$$

$$
\epsilon_{b}=\frac{1}{2 m_{b}} \quad \epsilon_{c}=\frac{1}{2 m_{c}}
$$

if $X(3872)$ is $\chi_{c 1}(2 P)$ these relations should be fulfilled (hard task...)

## $\mathrm{B}_{\mathrm{c}} \rightarrow \mathrm{B}_{\mathrm{s}, \mathrm{d}}$

$\left\langle P\left(p^{\prime}\right)\right| \bar{q} \gamma_{\mu} Q\left|B_{c}(p)\right\rangle=f_{+}^{B_{c} \rightarrow P}\left(q^{2}\right)\left(p_{\mu}+p_{\mu}^{\prime}-\frac{m_{B_{c}}^{2}-m_{P}^{2}}{q^{2}} q_{\mu}\right)+f_{0}^{B_{c} \rightarrow P}\left(q^{2}\right) \frac{m_{B_{c}}^{2}-m_{P}^{2}}{q^{2}} q_{\mu}$,

## Forward-Backward lepton asymmetry

$$
\mathcal{A}_{\mathcal{F B}}\left(q^{2}\right)=\left(\frac{d \Gamma}{d q^{2}}\right)^{-1}\left[\int_{0}^{1} d \cos \theta \frac{d^{2} \Gamma}{d q^{2} d \cos \theta}-\int_{-1}^{0} d \cos \theta \frac{d^{2} \Gamma}{d q^{2} d \cos \theta}\right]
$$

[^0]different pattern of correlations:
the presence of $R$ would produce

- anticorrelated BRs
- anticorrelated AFB $\left(B_{c} \rightarrow B_{s}^{*} \mu v_{m}\right)$ and $B\left(B_{c} \rightarrow B_{s} \mu v_{\mu}\right)$
- correlated AFB $\left(B_{c} \rightarrow B_{s}^{*} \mu v_{m}\right)$ and $B\left(B_{c} \rightarrow B_{s}^{*} \mu v_{\mu}\right)$
- large impact of T on AFB
- large impact of $T$ on $B R$ in $c \rightarrow d$

## $\mathrm{B}_{\mathrm{c}} \rightarrow \mathrm{B}_{\mathrm{s}, \mathrm{d}}^{*} \mu v_{\mu}$

## fraction of transversely polarized $\mathrm{B}_{\mathrm{s}, \mathrm{d}}$

$$
\mathrm{B}_{\mathrm{c}} \rightarrow \mathrm{~B}_{\mathrm{s}}^{*} \mu v_{\mu}
$$

$$
\mathrm{B}_{\mathrm{c}} \rightarrow \mathrm{~B}_{\mathrm{d}}^{*} \mu v_{\mu}
$$

$c \rightarrow s: F_{T}<0.5$ in $S M$ and $N P$
$\mathrm{c} \rightarrow \mathrm{d}: \mathrm{T}$ can reverse the hierarchy
$B_{c}$ decays represent an interesting testing ground for

- determination of $\mathrm{V}_{\mathrm{cb}}$
- flavour anomalies
- probing the structure of the hadrons in the final state
predictions based on NRQCD + HQE
- relations among FFs
- relations to be fulfilled by modes with final hadrons connected by HQSS
- tests of explicit calculations

[^0]:    $\mathcal{B}\left(B_{c}^{+} \rightarrow B_{s}^{*} \mu^{+} \nu_{\mu}\right)$
