

SFB School 2017

Tuesday 29 August 2017 - Friday 1 September 2017

Hotel Ebertor, Boppard

Scientific Program

The SFB School is held annually to discuss topics and activities related to the Collaborative Research Centre 1044 (SFB 1044). The school is designed to provide a relaxed atmosphere for meeting people that work in the various projects and for taking part in in-depth discussions.

The two-and-a-half-day event offers expert lectures on theoretical and experimental physics. Prof. Dr. Adam Szczepaniak, Director of the Nuclear Theory Center at Indiana University will be the key speaker on theoretical physics. Dr Sören Lange from Gießen will talk about experimental aspects. Talks by the key speakers will be held in the mornings followed by contributions from graduate students and postdocs in the afternoon.

As in former years, the school is being held in scenic Boppard, where it is possible to combine discussions with pleasant walks and panoramic views.
